# Mobile Beta Testing with TestFairy

Streamline your mobile app beta testing with managed app distribution and user feedback collection. Easily get new app versions to your testers and collect meaningful user feedback and bug reports, for faster app iteration and release cycles.

TestFairy helps mobile teams streamline their mobile development and beta testing processes, and provides real-time user feedback for mobile developers, enabling them to continuously release better app versions.

The platform offers a stream of capabilities including enterprise-grade app distribution, in-app bug reporting, session video recording, crash reporting, and integration to all the major bug systems, SSOs, CIs, and Team communication services. All this, in a highly secure, compliant private cloud.

RELEASE BETTER ANDROID AND IOS APPS IN SHORTER DEVELOPMENT CYCLES

App Distribution
Distribute any Android and iOS app version in a highly configurable and tightly secured enterprise-grade platform. Sync with your corporate Single Sign-on to enforce corporate role-based policies so only the right people will have access to your apps.

Video Sessions
Spend less time analyzing bug reports and quickly identify issues with session video recordings. Get real-time insights into how users use your apps on their real devices and understand everything that happened before an app crashed or a bug was reported.

In-app Bug Feedback
Uncover more issues and improve the quality of bugs reported by allowing your users to easily report meaningful bugs by simply shaking their device or just clicking on a button, with an intuitive in-app bug reporting interface.

Seamless Integrations
Integrate with JIRA, Trello, Slack, or any other platform so that the issues posted by your team will automatically get filed in the right place. TestFairy integrates seamlessly with any Issue Management System, Single Sign-on, Continuous Integration, Customer Support, and Team Communication platforms.

Security & Compliance

Comply with security standards by connecting TestFairy to any SAML 2.0 Single Sign-On. With end-to-end encryption you can encrypt sessions with your private keys, so nobody, but your team has access to your data. As TestFairy comes on a private cloud with a single tenant database it provides highly compliant organizations a secure environment.
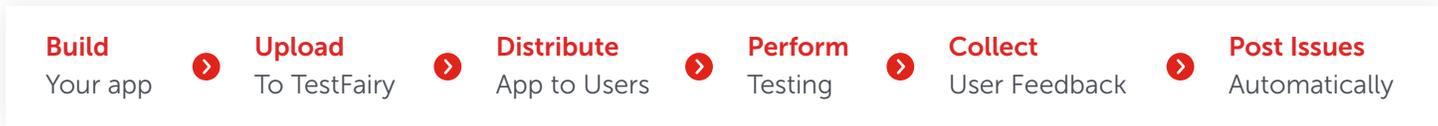

Remote Support

Get faster user insights to help your support teams understand how customers use their apps in production. Provide your support teams with the information they need to improve response time for customer issues and escalate support tickets to development teams in one click.

"TestFairy has helped us a lot in the integration process, solving any issue that has arisen in our journey."

Enric Solà, Quality Innovation Manager at Central QA in King

CLOUD ARCHITECTURE THAT INTEGRATES

Simplify your mobile beta testing processes

Build Your app ❯ **Upload** To TestFairy ❯ **Distribute** App to Users ❯ **Perform** Testing ❯ **Collect** User Feedback ❯ **Post Issues** Automatically

EASILY INTEGRATE WITH ANY TOOL IN YOUR ECOSYSTEM

CI

Jenkins | GitLab | TeamCity
Bamboo | GitHub | Travis CI
Circle CI | Bitrise | Fastlane
Gradle
